### **PUBLIC HEALTH OFFICIALS URGE VACCINATIONS FOR PRETEENS**

**(SANTA BARBARA, Calif.)** -- To help protect adolescents against dangerous diseases, the Santa Barbara County Public Health Department is joining with the California Department of Public Health in recognizing February 11<sup>th</sup> – 17<sup>th</sup> as Preteen Vaccine Week.

Vaccines offer safe and effective protection from infectious diseases. By staying up-to-date on the recommended vaccinations, people can protect themselves, their families, and their communities from serious, life-threatening illnesses. If you haven't done so already, now is the time to ask your doctor about vaccines recommended for your child. The Centers for Disease Control and Prevention (CDC) and the California Department of Public Health recommend your son or daughter receive the following vaccines:

- **Human Papillomavirus (HPV)**
  - [HPV](#) vaccine is safe, effective, and can protect against infection with the types of HPV that can cause certain cancers.
- **Pertussis**
  - [Whooping cough \(pertussis\)](#) can cause severe coughing spells. Preteens suffering from whooping cough can be hospitalized and miss weeks of school. **Under [state law](#), all incoming 7<sup>th</sup> grade students** will need proof of a Tdap booster shot.
- **Meningococcal**
  - [Bacterial meningitis](#) is a very serious infection that can cause brain damage, arm and leg amputations, kidney damage, and death. That's why it's crucial for all preteens to get one shot of quadrivalent meningococcal conjugate vaccine at 11 or 12 years of age and a booster at age 16.
- **Influenza**
  - [Influenza](#) is widespread in California. Everyone 6 months of age and older needs to be immunized against influenza each year.
